About nom!

Project Overview

Main Features

Market Research

Competitive Analysis

Project Overview

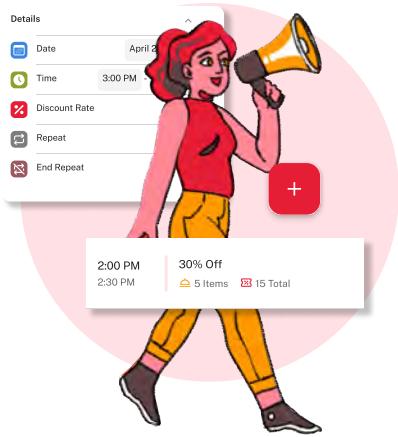

Outside of rushed lunch times and crowded happy hours, it is common for restaurants to have off-peak hours. Unfortunately, these slow periods cost restaurants money, as they have to keep running and use up their valuable resources despite the lower foot traffic. Additionally, they often lack the time to strategize promotions effectively.

Enter **nom!**—the mobile app designed to revolutionize restaurant businesses during slow hours. Restaurant owners can easily plan and execute time-limited deals for their slow hours using nom!'s Deal Scheduler feature.

Creating these offers is as simple as restaurant owners seamlessly connecting their menu items to discounts. These deals are then showcased in our app, where customers can easily claim and redeem them. Our app also features an Ad Maker tool that empowers businesses to create eye-catching banner ads using pre-designed templates. Leveraging an AI text generation function, this tool crafts compelling headlines and taglines to further entice potential customers. With nom!, restaurants can turn their off-peak hours into lucrative opportunities while delighting diners with irresistible offers.

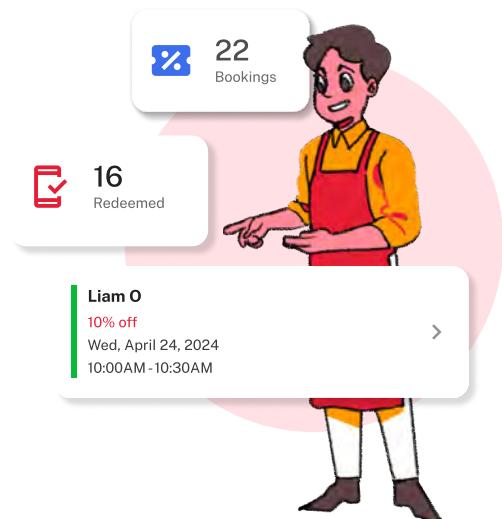

Main Features - Merchant

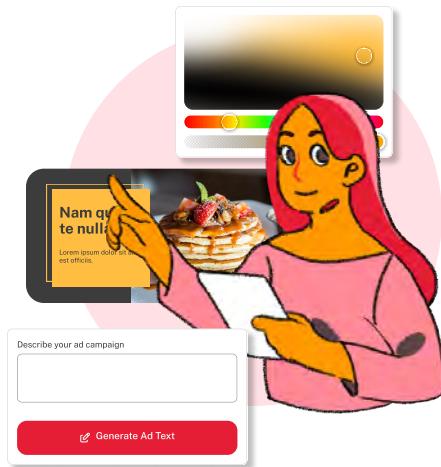

Deal Scheduler

MERCHANTS CAN SCHEDULE DEALS LINKED WITH MENU ITEMS IN THE FORM OF REDEEMABLE, TIME-LIMITED COUPONS. THESE COUPONS WILL APPEAR ON CUSTOMERS' HOME AND SEARCH SCREENS AS WELL AS RESTAURANT PROFILES. MERCHANTS HAVE THE FLEXIBILITY TO CUSTOMIZE THE COUPONS' DATES, HOURS, DISCOUNTED MENU ITEMS AND DISCOUNT RATES.

Smart Ad Maker

IN-APP BANNER ADS CAN BE CREATED EFFORTLESSLY USING OUR SMART AD MAKER. THE PROCESS INVOLVES UPLOADING A PROMOTIONAL IMAGE, CUSTOMIZING AND PICKING A TEMPLATE, ADDING THE AD COPY (WITH THE OPTION TO USE AI TEXT GENERATION FOR ENGAGING AND CONCISE RESULTS), SETTING THE AD CAMPAIGN DURATION AND FINALISING PAYMENT.

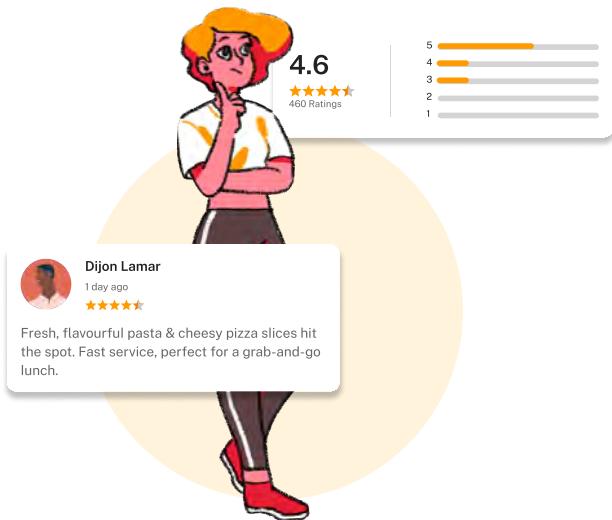

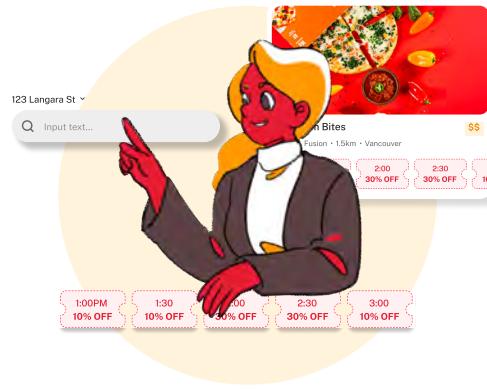

Main Features - Customer

Search & Recommend Deals

Customers can search for deals and receive personalised deal recommendations according to their search and browse history. They can filter and browse deals by food categories and nearby restaurants.

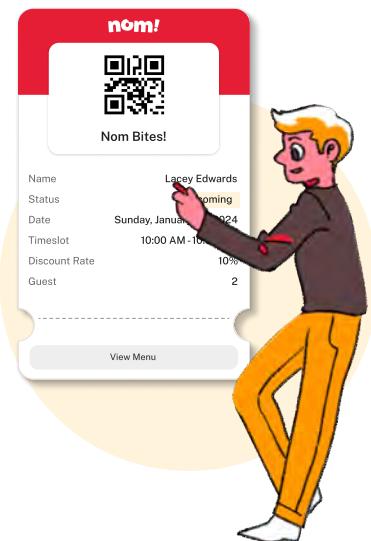

Ratings

Customers can leave ratings and comments after they have redeemed their deals and dined at our merchants' businesses.

Deal Redemption

Deals claimed by customers can be redeemed at our merchants' restaurants via a QR code, which can be scanned with a merchant account during customer visits.

Market Research

Food Business in Canada

The sales in the food services and drinking places sector in Canada has continued to rise in year-over-year sales, with sales in October 2023 reaching \$7.8 billion, according to Statistics Canada. Following the increase in demand for dining out in the past few years, opportunities for services assisting restaurants to boost and grow their businesses arises.

According to the 2023 Restaurant Online Ordering Trends Report by DoorDash, there had been growth in the traditionally off-peak hours of late-night and breakfast categories, with late-night orders increasing by 68% over each year, and breakfast orders growing by 53%. Food business owners may benefit from leveraging this shift in consumer behavior and promote their businesses with off-peak deals and options outside of regular meal times.

Food Services and Drinking Places Sales

User Interviews Findings

Through our user interviews with food establishment owners to r , and their current marketing strategies, we discovered that they face the following pain points and situations:

- Off-peak periods rely on multiple factors and are not the same for every type of food business. The factors affecting off-peak hours and seasons include weather, target demographic, and open hours. Off-peak hours are also often utilized for other business operations, including event planning, inventory and logistics handling, shift management and more. Due to the diverse nature of off-peak periods and their usages to each business, flexibility and customizability would be important for scheduling deals.
- Many food establishments are on a smaller scale, such as family-owned and local businesses. They lack the time and labour to plan and implement extensive marketing campaigns, causing them to often forgo marketing efforts or mostly promote their business on social media, their own websites and at storefronts.

“Off-peak hours depend on days, strikes, weather and other factors”

- Restaurant Owner, Vancouver -

“We can only do promotions when I have the time to plan them”

- Cafe Owner, Vancouver -

“Advertising that appeals to customers is very important”

- Boba Tea Store Owner, Seattle -

Competitive Analysis

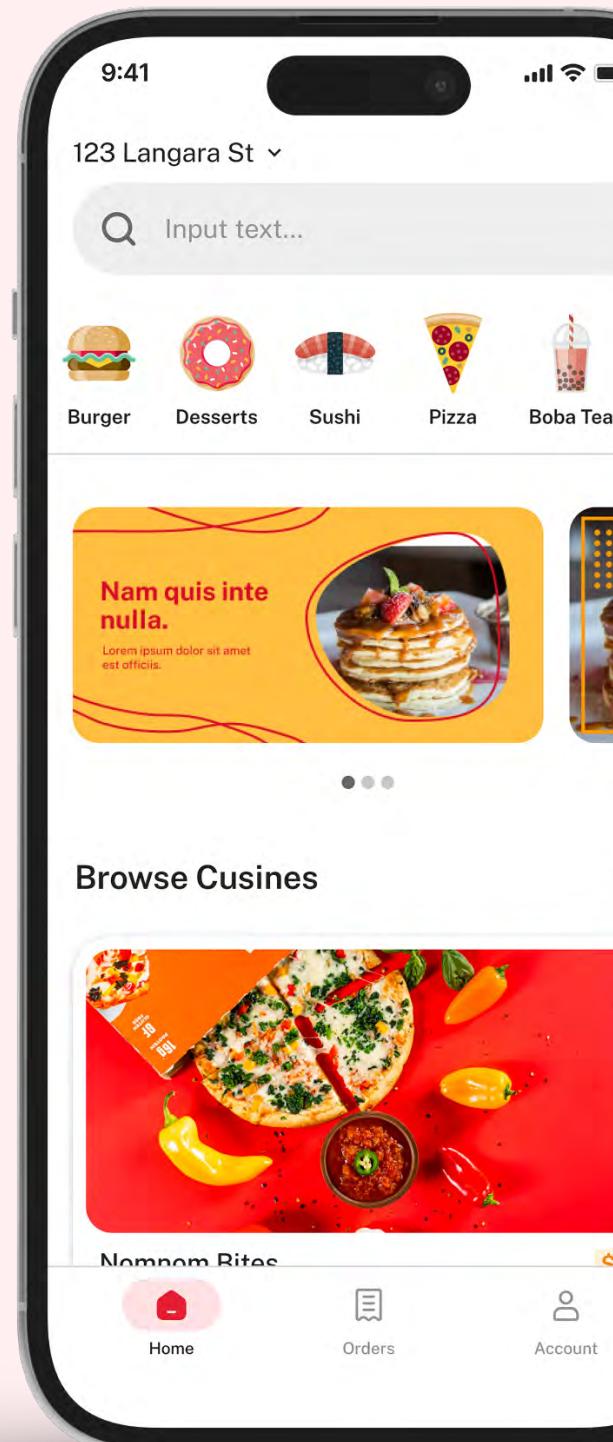

Unlike our competitors, nom! prioritizes smaller restaurants in our roster of partners. Because of this, we have a Deal Scheduler where restaurant owners with limited time can easily define their time-based promos days or even weeks ahead in batches.

Since smaller restaurants may not have the man-power and resources to market their deals, nom! also has an Ad Maker where businesses can easily input their promo details, choose an ad template, generate an ad, and run an ad campaign in-app with just a few clicks.

Technology Usage

Project Management Tools

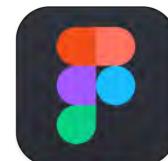

The nom! team practices agile methodologies and keeps track of tasks using a Jira scrum board. Slack is used by our team for professional communication and discussions throughout the project.

Design Tools

nom!'s design team uses a variety of design tools for app designs and promotional materials. Figma is utilized for creating user flows, design systems, wireframes, mockups, and final proposal designs. Its collaboration capabilities facilitate seamless iterative processes and design hand-offs. Adobe Photoshop is employed for editing and resizing raster-based visual assets.

Adobe Illustrator is used for creating vector-based graphics such as icons, logos and social media promotional assets. Adobe Premiere Pro and After Effects are used to edit video and audio, as well as create video effects for producing the project's promotional video.

Development Tools

nom!'s system architecture comprises a comprehensive ecosystem for building and deploying a mobile application. On the front end, React Native and TypeScript are employed for cross-platform development, ensuring a robust and type-safe scripting environment. State management is handled efficiently with Tanstack for server-side operations and Zustand for client-side tasks.

On the backend, JavaScript and Node.js with Express power the server-side logic, while Nginx serves as the web server for handling HTTP requests and load balance. MongoDB serves as the database solution, providing scalability and flexibility for data management.

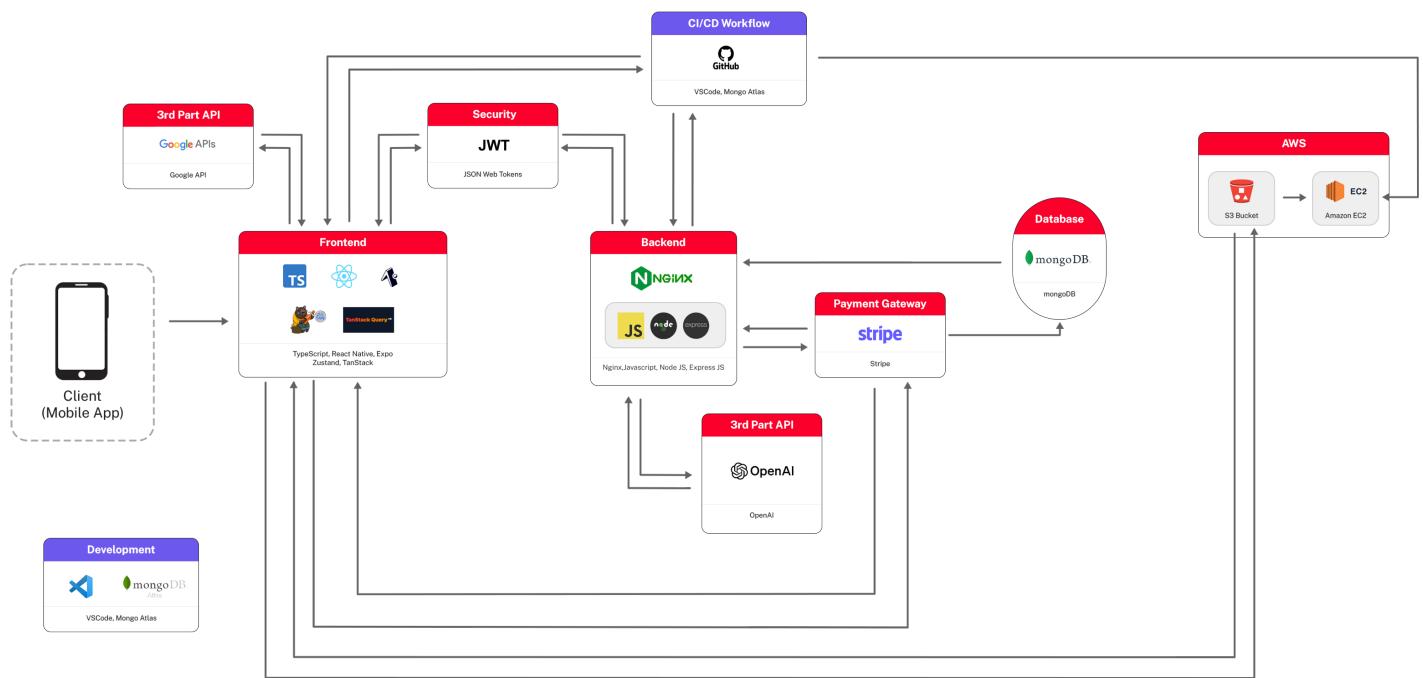

Third-party integrations play a crucial role, with the Stripe API managing payment processes securely and the AWS S3 bucket storing media files like images. Google API is utilized to address auto-complete functionality, enhancing user experience. Furthermore, nom! leverages OpenAI to generate tailored text content for custom ad makers, enhancing marketing efforts and maximizing engagement.

Continuous integration and deployment workflows are automated through GitHub Actions, ensuring seamless delivery of code changes. Backend services are deployed to AWS EC2 instances, providing a scalable and reliable infrastructure.

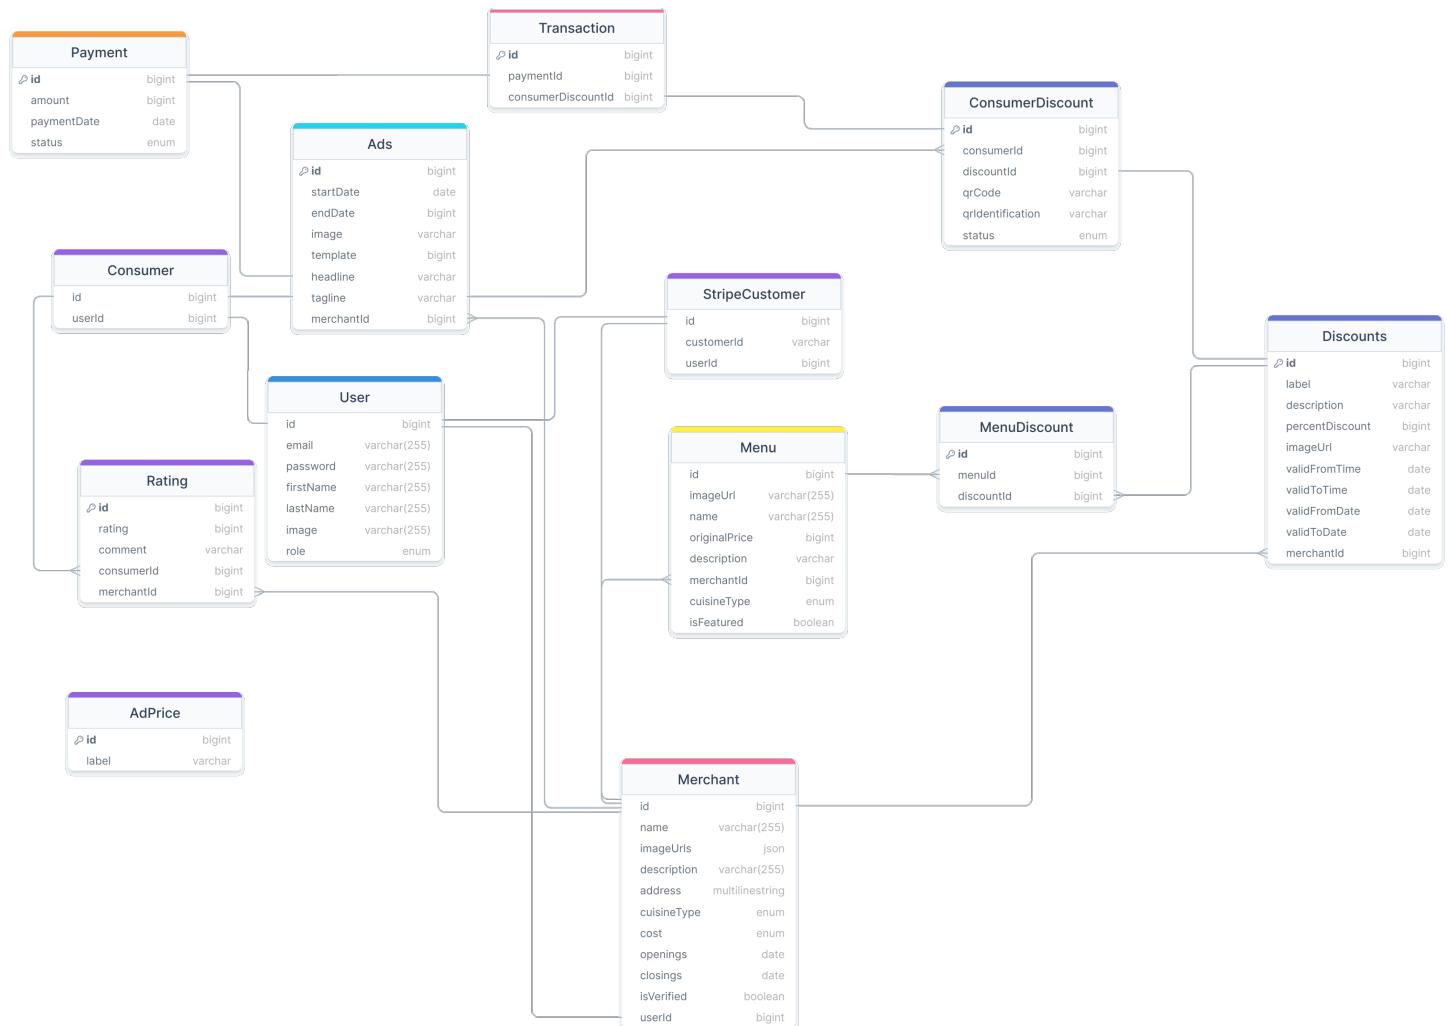

System Architecture

Overall, the system architecture prioritizes security, efficiency, and scalability, delivering a robust mobile application solution with seamless integration of essential functionalities and services.

Merchant

Priya Kumari

Age: 36

Occupation: Restaurant owner

Restaurant Name: Fraser Indian Bistro

Restaurant Type: Family-owned Indian Restaurant

Location: Vancouver

Biography

Priya Kumari is the business owner of Fraser Indian Bistro, a medium-sized Indian restaurant. She finds her business to be fairly quiet during 3-5 pm on weekdays, and hopes to attract more customers during this period by discounts. Unfortunately, she finds it difficult to create promotional materials as she is often busy with business operations. The restaurant has special events every month, which requires Priya to utilize some of the off-peak hours to plan for the events, so she wants a flexible solution that allows her to pre-schedule and customize the dates and hours for the upcoming weeks' discounts.

Frustrations

- Often too busy to plan and create promotional materials
- Relies on multiple social media accounts to promote discounts
- Lack the means to execute a flexible discount schedule without hassle

Goals

- Bring in more customers during off-peak hours
- Create flexible discount schedules for her business

Frequently Used Apps

“

Food is our common ground, a universal experience.

”

Merchant

Michael Tremblay

Age: 40

Occupation: Cafe owner

Restaurant Name: Coffee Bear

Restaurant Type: Family-owned cafe

Location: Vancouver

Biography

Michael and his wife own a small cafe. They often offer promotions and discounts to customers to boost up the customer flow. They find out most of the visitors are their regular customers. They would like to attract more new customers. However, Michael and his wife are both unfamiliar with social media marketing. Therefore, they don't know how to promote their business in an easy and low-budget way. They want an easy-to-use platform to solve this problem.

Frustrations

- New to social media marketing
- Limited budget for commercial and promotional activities
- Uncertain about how to attract more customers

Goals

- Promote their cafe in a simple and low-budget way
- Attract new customers by promotions

Frequently Used Apps

“
All you need is love
and good coffee !!
”

**Customer**

Samantha Young

Age: 23

Occupation: Part-Time Sales

Location: Vancouver

Biography

Samantha enjoys exploring new restaurants. Moreover, she is always mindful of her daily spending budget. She likes to search for promotions and discounts online or through some apps. With her flexible daily schedule, she prefers to avoid busy hours and have a relaxed and enjoyable dining experience, while benefiting from discounts.

Frustrations

- Searching for restaurant with promotions takes time
- Some of promotions or discounts are not valid

Goals

- Find an easy way to search and access promotions and discounts
- Has the best deal and experience while dining out

Frequently Used Apps

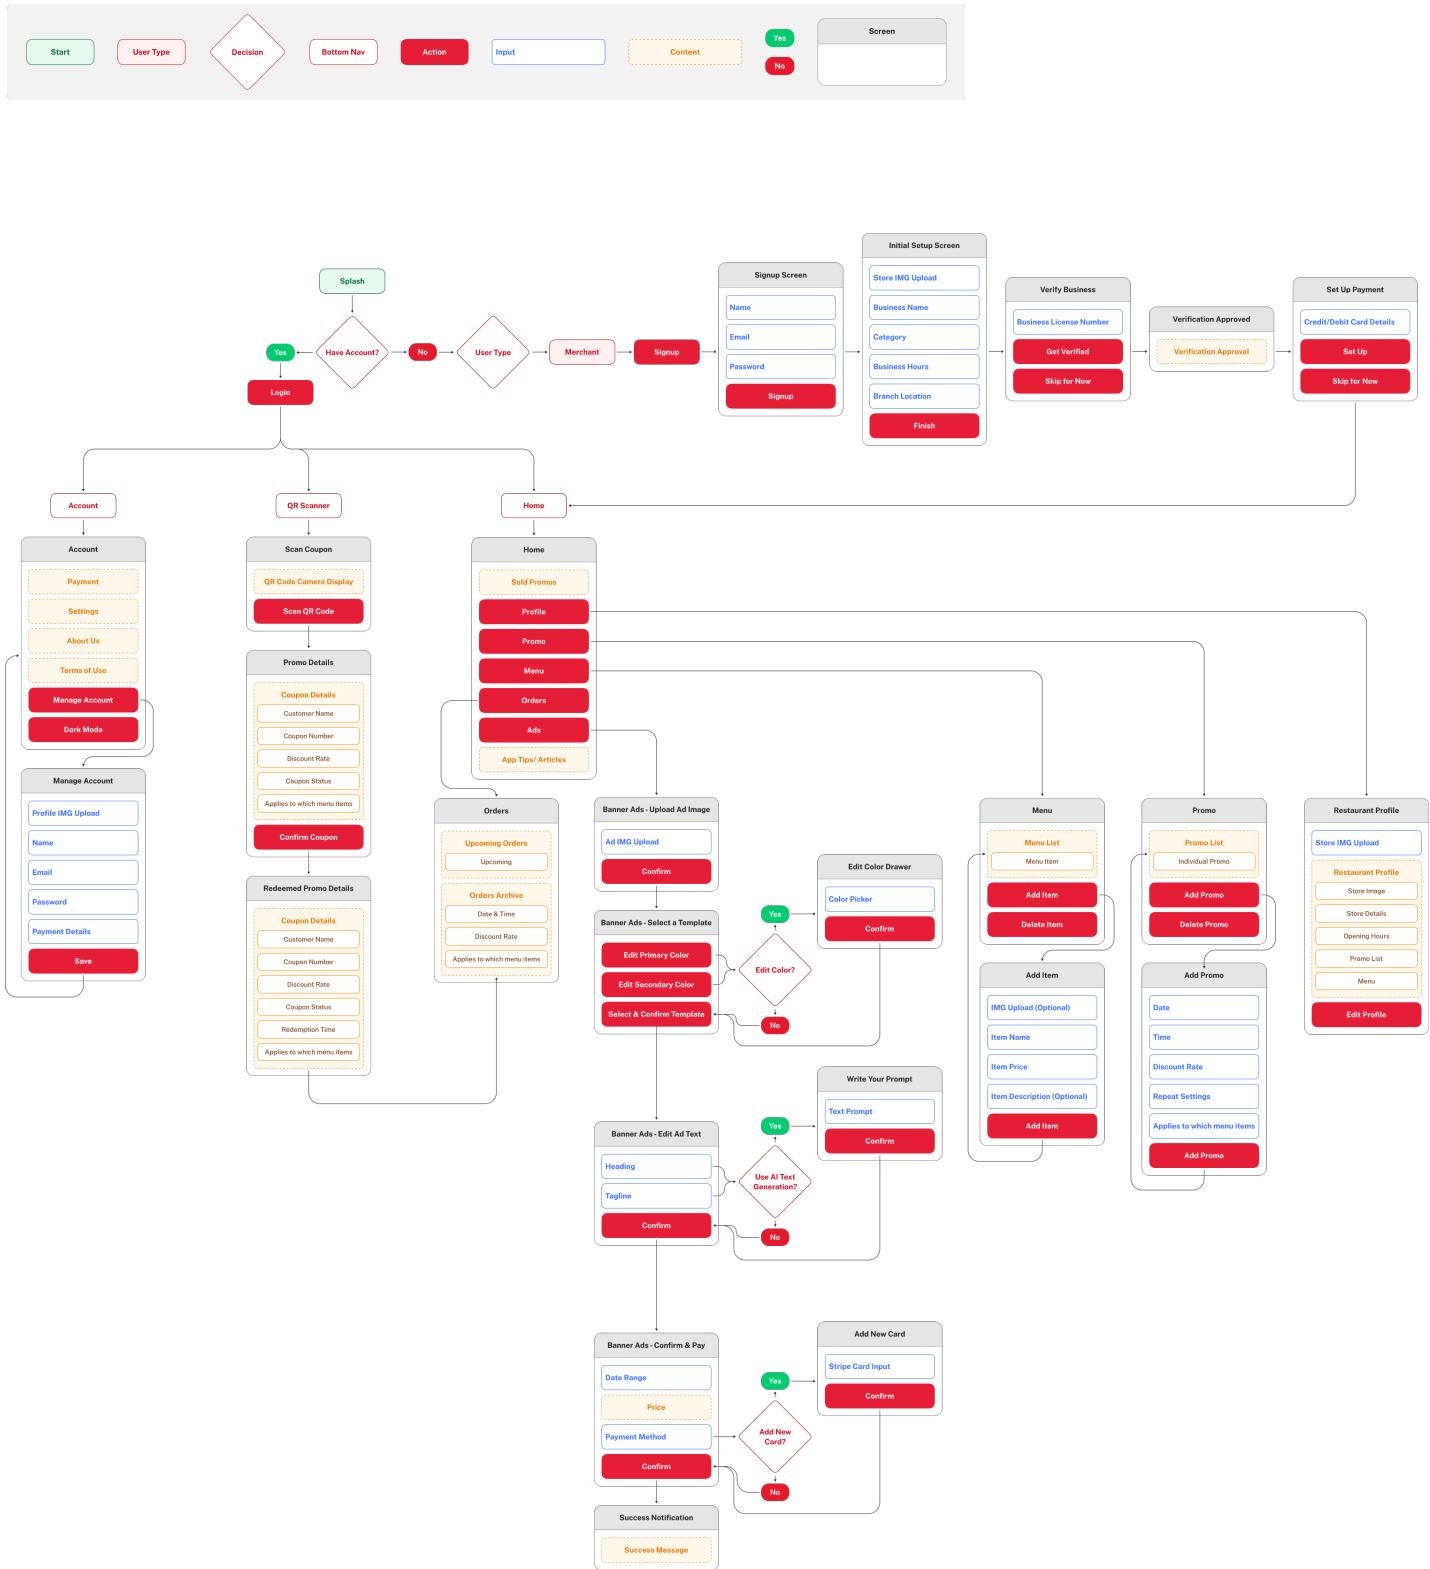

“

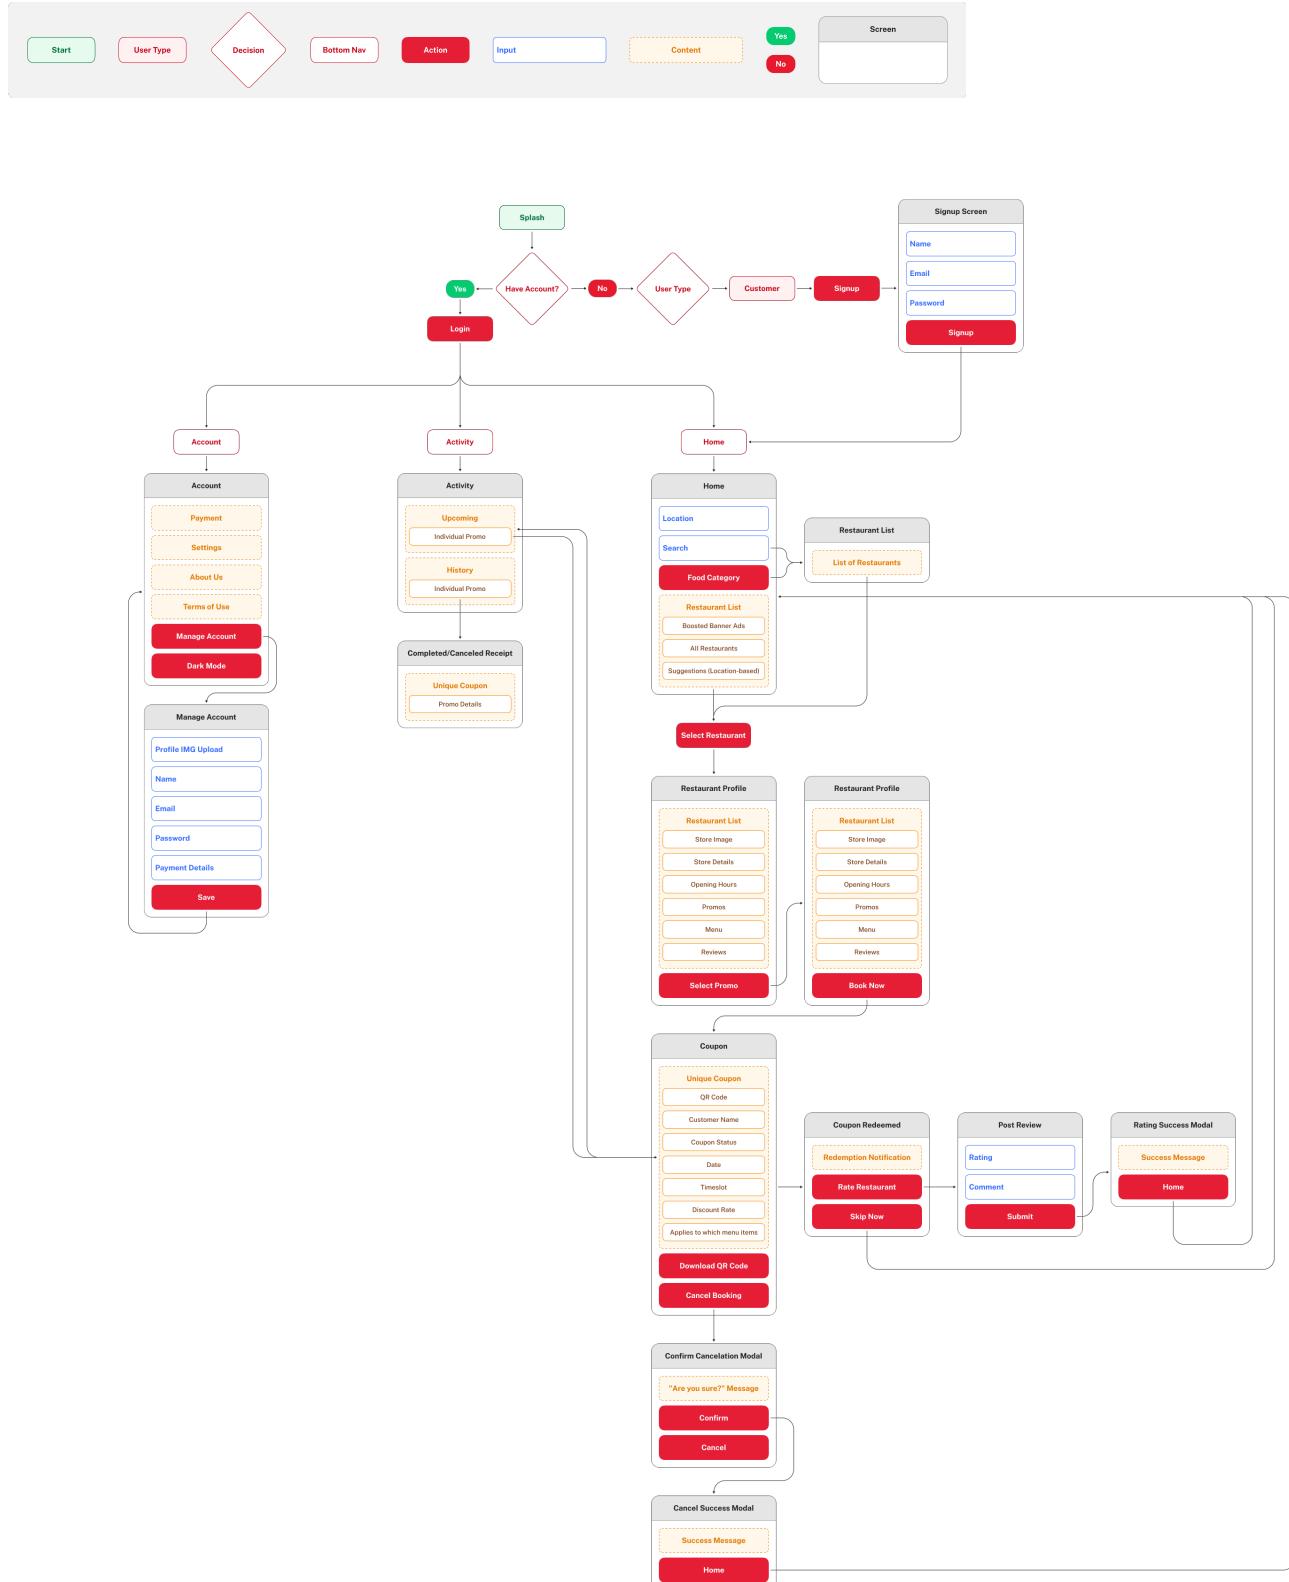

People who love to eat are always the best people.

”

Merchant User Flow

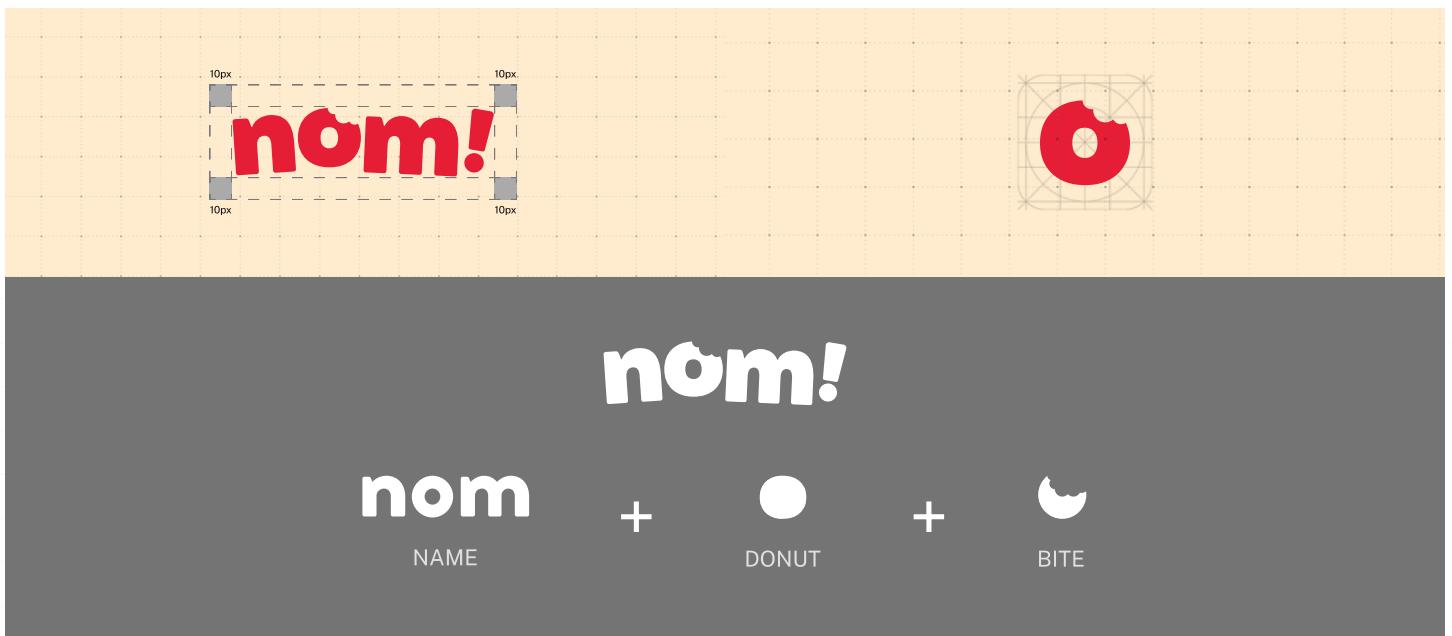

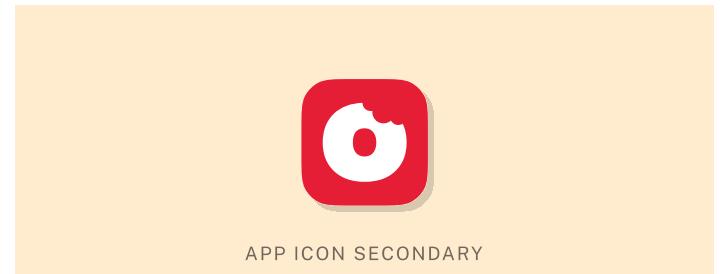

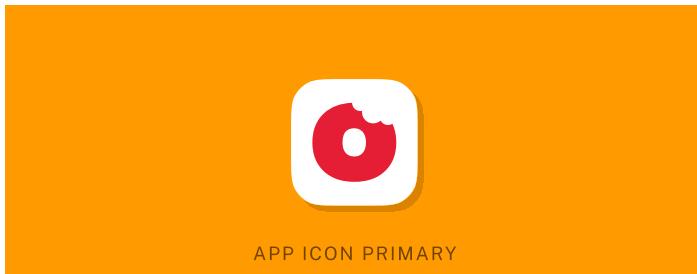

Customer User Flow

Branding

Logo

nom!'s logo is inspired by the shape of a bitten donut, representing the casual, friendly, and food-related nature of our brand. The use of red and white creates bold contrast, with red representing the discount-based features of the app.

Imagery & Illustration

We wanted to embody the spirit of inclusivity and diversity in our visuals. For photography, we strive to include talents from a wide range of cultures while the casual look of our illustrations give off a welcoming feeling.

Design System

Typography

Public Sans is chosen for nom!'s UI typeface due to its neutral tone & great legibility

Wireframes

Before

After

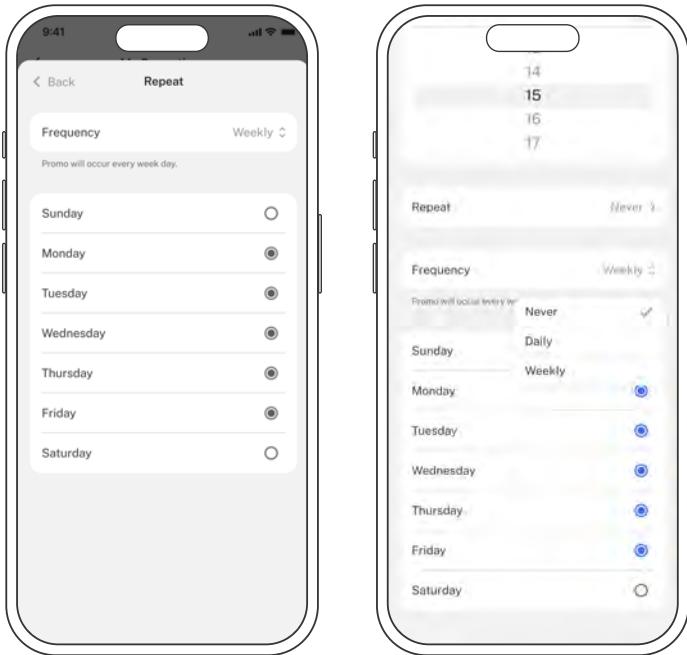

Through conducting a cognitive walkthrough on the user selection part in account creation, we found that the multiple lines of heading and instructions caused confusion. The hierarchy of user type buttons also made one option seemed more important than the other. The next iteration featured simplified UX copy and a side-by-side layout with large icons for the user types.

Before

After

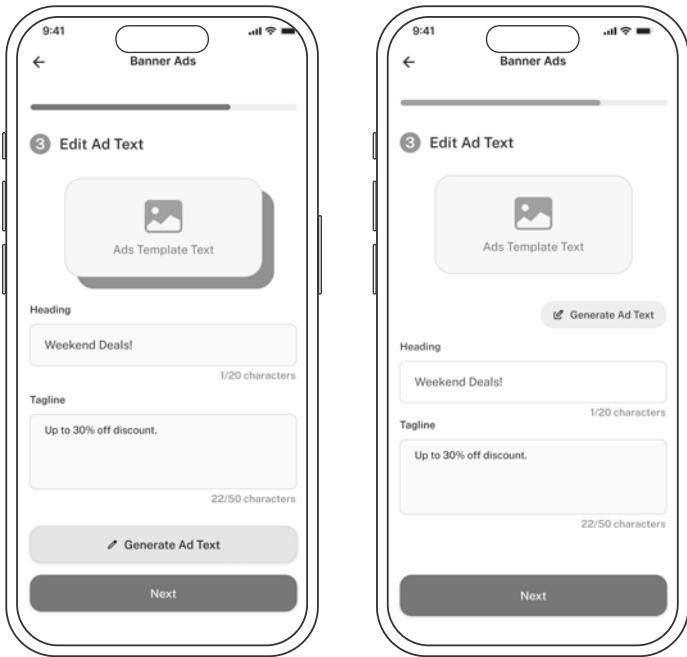

In the initial account set up screen following user selection, we found that the use of radio buttons for day of week selection to be confusing in the earlier design, as they usually signify single-select options. We then updated the design by removing the radio buttons and adding a modal for opening hours customization.

Before

After

During the promo set up process, the earlier design navigates to a new screen for repeat settings. To create a smoother user experience, we later integrated the repeat frequency input into the main Promotional Details screen. This change consolidates all promo settings in one place, eliminating the need for navigating through multiple screens.

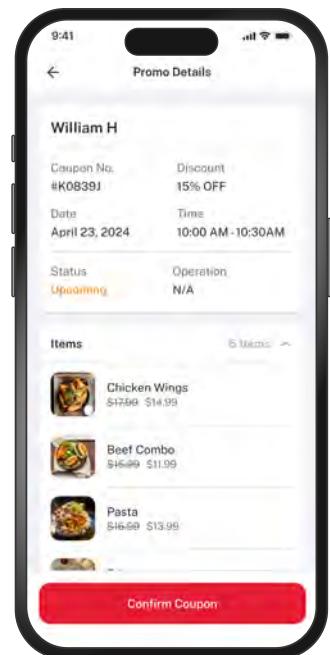

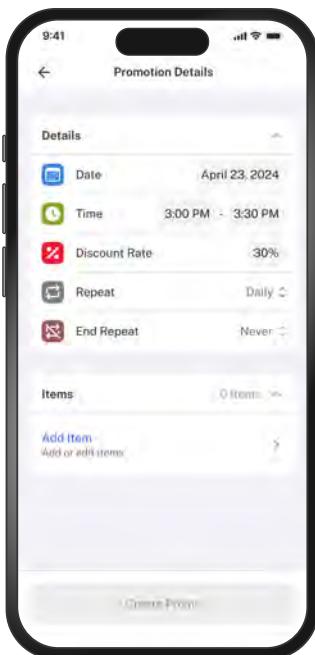

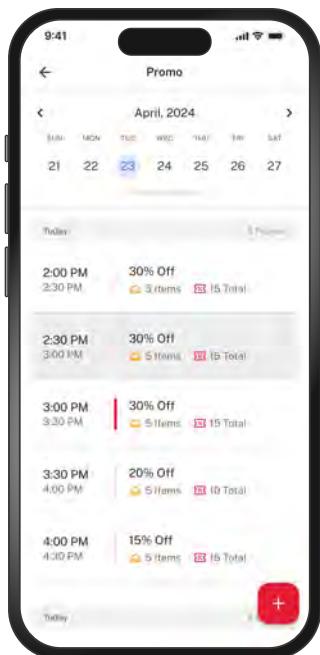

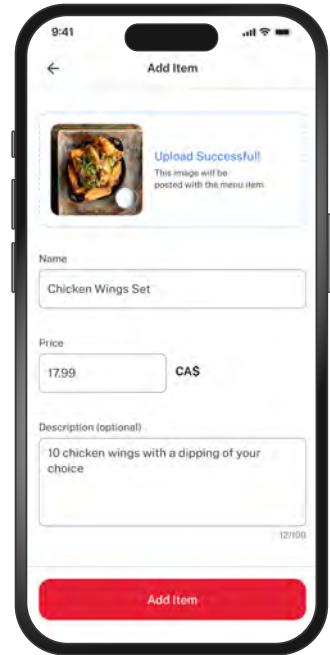

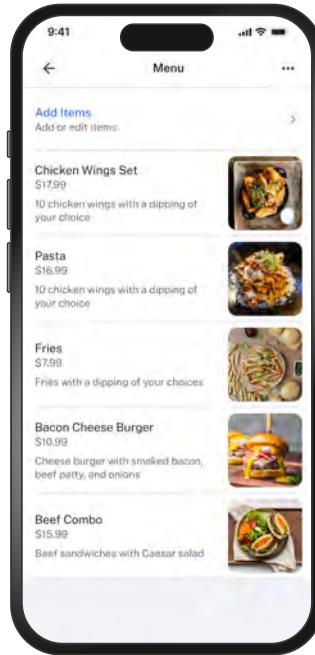

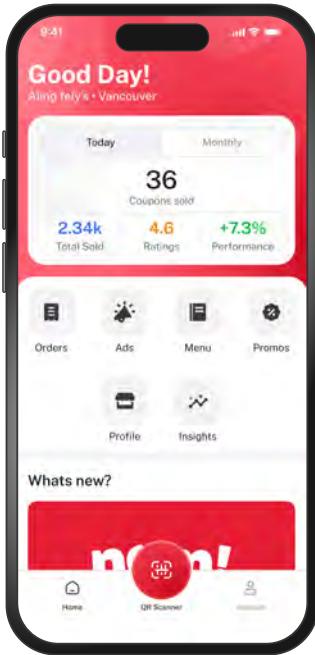

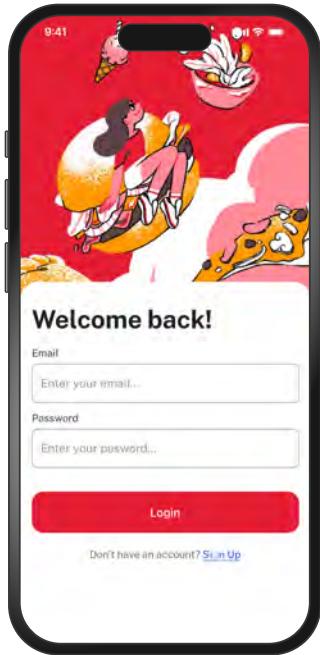

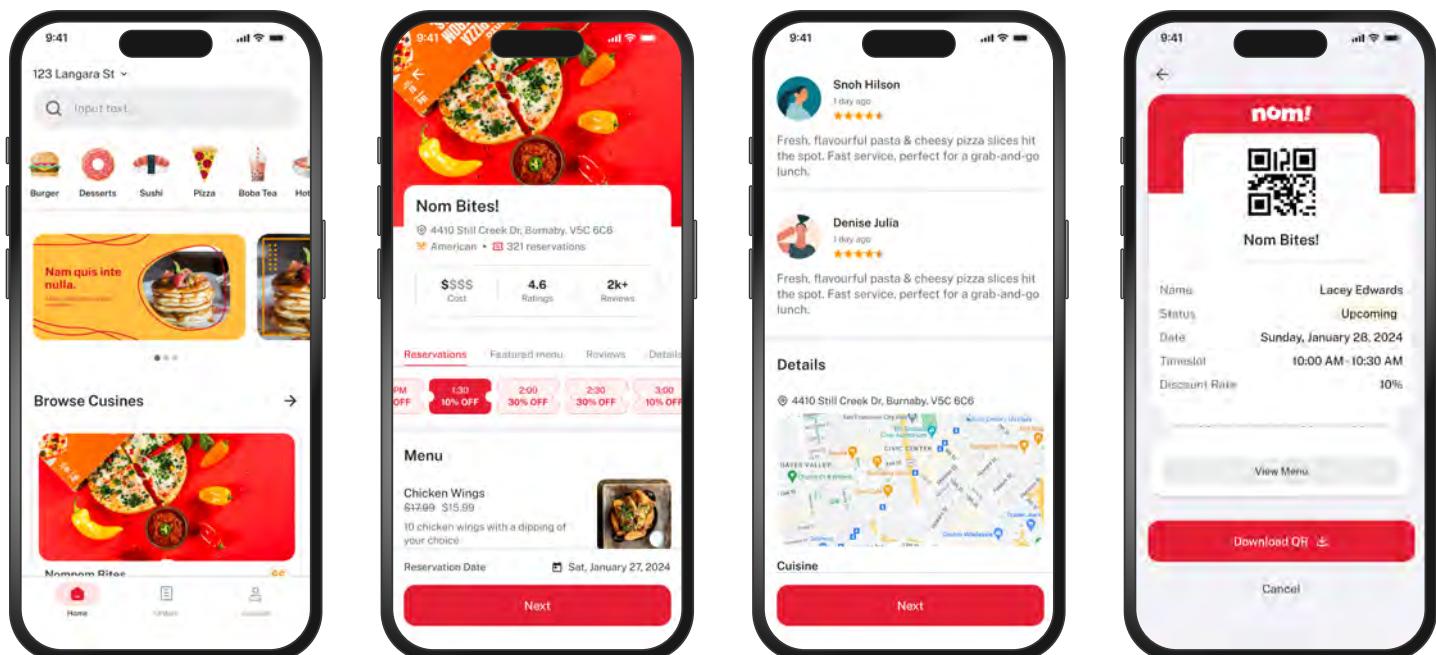

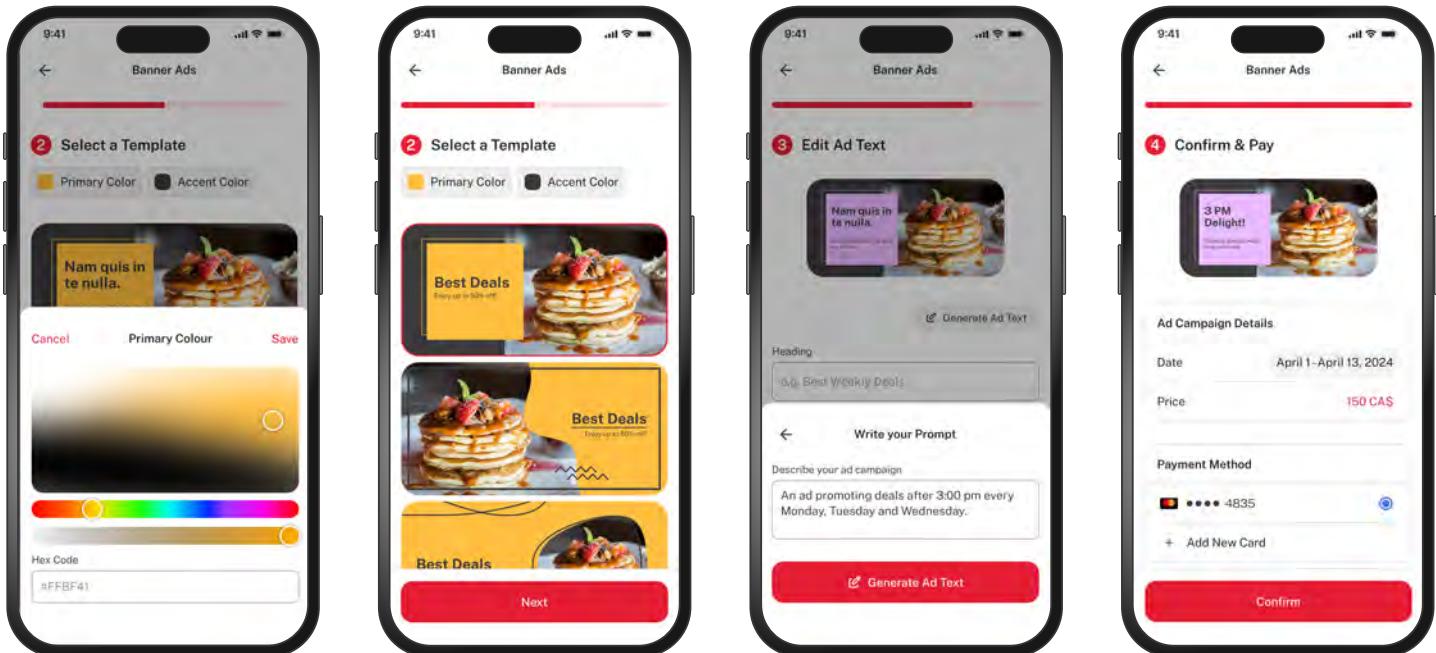

Before

After

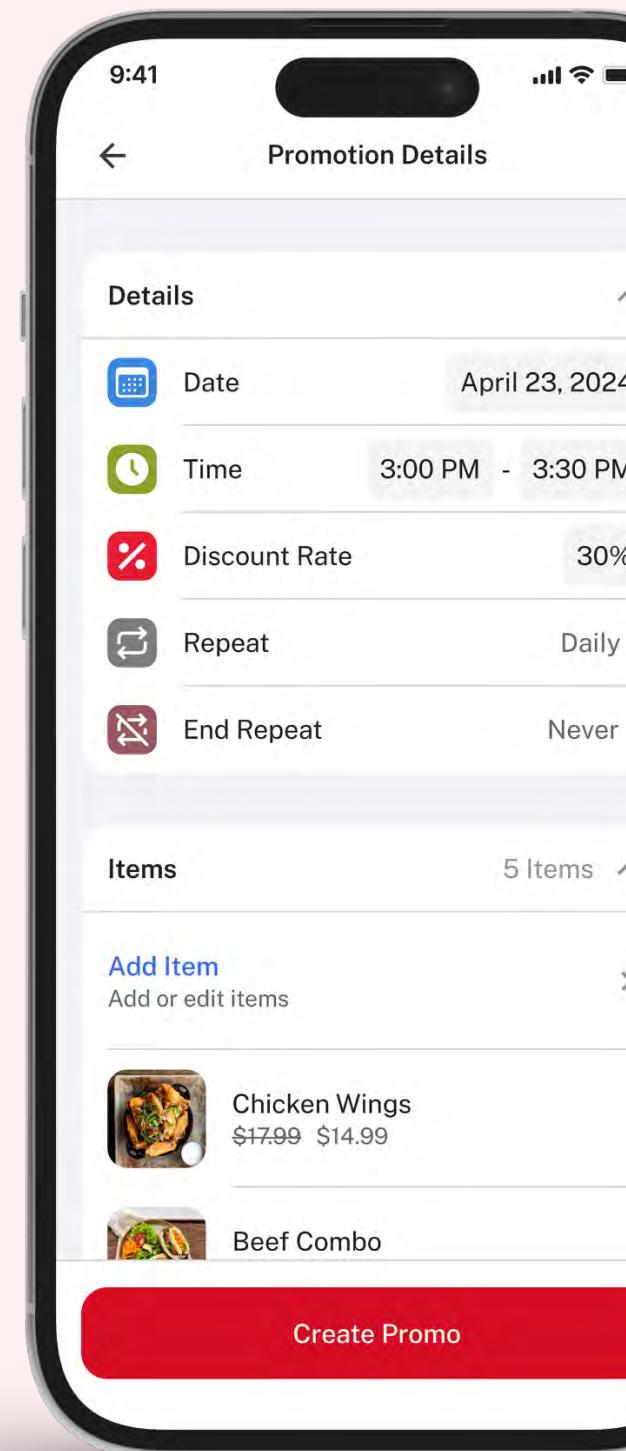

The earlier design of the “Generate Ad Text” button for opening up the AI Text Generation tool was placed at the bottom and on top of the “Next” button. This button was then changed to be positioned between the ad preview and the text inputs to create clearer hierarchy and distinction between the two button’s functions.

Business Model

Business Strategy

Future Features

Business Strategy

During the first year after nom!'s launch, early partner merchants will receive exclusive benefits, including exemption from the standard \$1 commission fee per deal redeemed for a set number of deal redemptions per month. They will also have access to the Ad Maker feature for free, and receive priority when testing new features. After the first year, the Ad Feature would be available for a monthly rate.

While nom! Is currently limited to restaurants, in its third year, we will expand to offer deals for other types of industries. We are planning to include new features as well, such as customer reviews with customer sentiment analysis for merchants and deal subscription for customers.

Future Features

Business Insights & Recommendations

Business insights will be derived from customer ratings, redeemed coupons, and sentiment analysis of customer reviews. Additionally, ad reach and conversion rates will be used to assess the effectiveness of advertising campaigns. Based on the data collected, tailored recommendations will be provided to optimize business strategies.

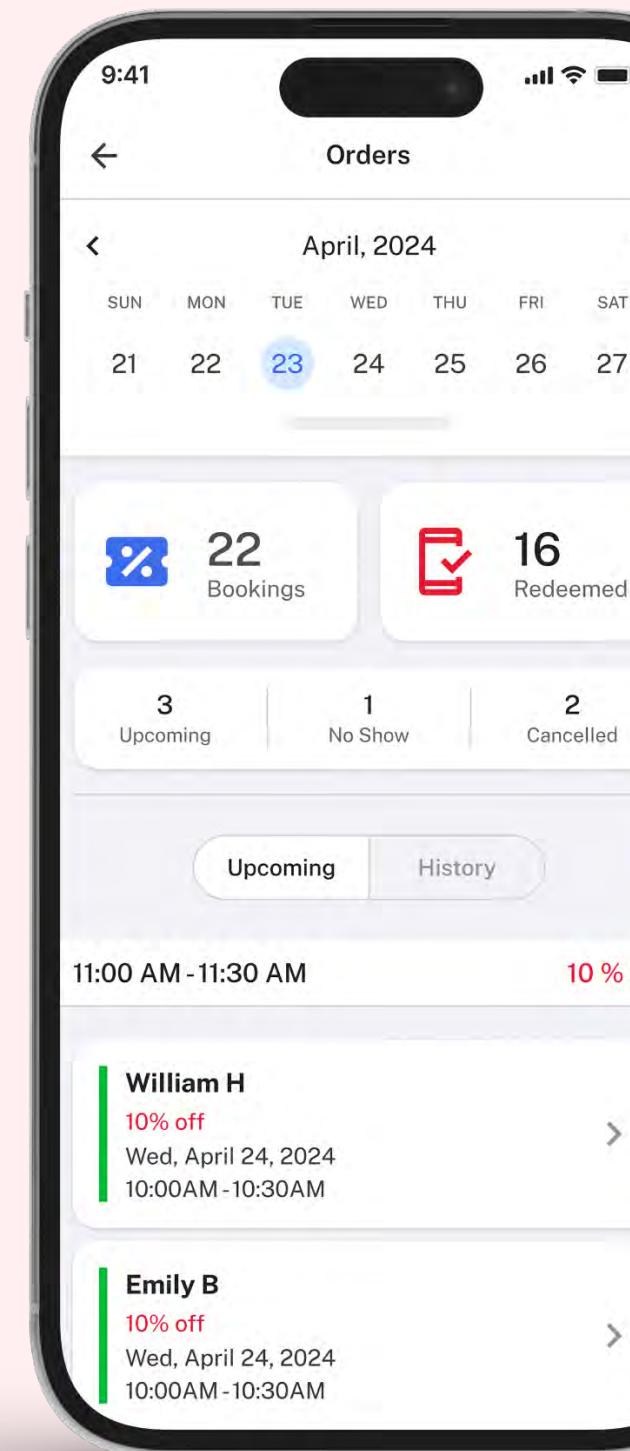

Smart Social Media Ad Maker

In addition to the existing Ad Maker feature, merchants will have the ability to generate social media ads using our templates and AI-generated text for both ad copy and post captions. They can effortlessly publish these ads to their connected social media accounts directly within the app.
